Man charged over armor-piercing bullet sale to Las Vegas gunman

CHARLOTTE, Mich. (Reuters) - The enraged father of three daughters who were sexually abused by Larry Nassar lunged at the former USA Gymnastics national team doctor and tried to attack him during a sentencing hearing in a Michigan courtroom on Friday.

The father, Randall Margraves, was nearly within striking distance of Nassar before officers tackled him to the floor in front of shocked spectators including his daughters. The judge later accepted Margraves' explanation that he "lost control" of his emotions and said she would not punish him.

The chaotic scene began minutes after sisters Lauren and Madison Margraves had concluded tearful victim statements on the second day of a sentencing hearing in Eaton County, following similar presentations by scores of other women through previous court sessions.

Nassar has already been sentenced to up to 175 years in prison for his guilty plea in neighboring Ingham County to molesting young women under the guise of medical treatment. He is scheduled to receive an additional sentence on Monday for his guilty plea to related charges in Eaton County.

At a news conference with his family and attorney hours after the outburst, Margraves apologized for his behavior, saying he was "remorseful" and "embarrassed" for losing his composure.

"I am no hero. My daughters are heroes, and all the victims and survivors of this terrible atrocity," he said, adding that he became enraged when "I had to hear what was said in those (victim) statements, and I had to look over at Larry Nassar shaking his head."

Margraves said he had never heard the explicit details of what his daughters endured at the hands of Nassar until he listened to their accounts in court.

A tall, burly man with thick gray hair, Margraves said his relationship with his daughters had long been "strained, distant and difficult. Now I know the main reason. The reason was Larry Nassar."

"Now I have to deal with the fact that I failed to protect my daughters," he added.

The courtroom disturbance came after Margraves, standing alongside his daughters and wife, asked if Judge Janice Cunningham, as part of sentencing, would "grant me five minutes in a locked room" with Nassar.

The judge replied that was not an option and rebuked Margraves for his vulgar language in calling Nassar "a son of a bitch" in court. Margraves then asked for one minute alone instead. The judge demurred again as some in the courtroom laughed uncomfortably.

The father then bolted towards Nassar, seated in an orange jump suit behind a nearby table. Margraves' daughters' hands flew to their mouths, and one of Nassar's lawyers moved to shield his client.

Randall Margraves (L) lunges at Larry Nassar, (wearing orange) a former team USA Gymnastics doctor who pleaded guilty in November 2017 to sexual assault charges, during victim statements of his sentencing in the Eaton County Circuit Court in Charlotte, Michigan, U.S., February 2, 2018.

Gasps, cries and shouts filled the courtroom as Margraves was wrestled to the floor, knocking items off a desk on the way down before he was handcuffed, while Nassar was whisked to safety.

"One minute!" Margraves demanded repeatedly, his head pinned down. As uniformed

Randall Margraves (C) is tackled after he lunged at Larry Nassar (not seen) a former team USA Gymnastics doctor who pleaded guilty in November 2017 to sexual assault charges, during victim statements of his sentencing in the Eaton County Circuit Court in Charlotte,

"I failed my own daughter," Lynn Erickson said tearfully in court on Friday, as her daughter Ashley, one of Nassar's victims, wiped away tears. Margraves' daughters had also described the impact on their parents. At Nassar's first sentencing hearing last month, his oldest daughter Morgan said her father "went out driving to look for him around East Lansing" after news of his abuse broke.

"I'm not exactly sure what he would have done if he saw him," she said. "However, he felt he still had to protect us in the way fathers do for their daughters." The county sheriff said his office would decide by next week whether to seek criminal charges against Margrave for his conduct. An online fundraising page at the website GoFundMe had collected more than \$18,000 for the father's potential legal fees by early evening. Following the recess in Friday's proceedings, the judge declined to cite Margraves for contempt of court.

"There is no way that this court is going to issue any type of punishment, given the circumstances of this case," Cunningham said.

"We all understand this father's action," said actor and pro-wrestler Dwayne "The Rock" Johnson. "Nassar's punishment will go far beyond sentencing. Behind bars, he'll soon know what hell means."

The case against Nassar, who is also serving a 60-year federal term for child pornography convictions, has sparked investigations into how U.S. Olympic officials, USA Gymnastics, the sport's governing body, and Michigan State University, where Nassar also worked, failed to investigate complaints about him going back years.

In the latest fallout from the scandal, Valeri Liukin, the coordinator of the U.S. women's gymnastics team, said on Friday that he was resigning. In a statement cited by NBC News, Liukin said, "The present climate causes me, and more importantly my family, far too much stress, difficulty and uncertainty."

USA Gymnastics said in a statement that it had accepted Liukin's resignation. The Republican retreat, an opportunity for lawmakers to discuss legislation and politics in the run-up to November's congressional elections, was scheduled to run until midday Friday. President Donald Trump was due to attend on Thursday. Vice President Mike Pence went as scheduled on Wednesday.

Trump told reporters at the White House he had spoken to Ryan and others, and that the accident had been "a pretty rough hit."

Halicek gives her victim impact statement during the sentencing hearing of former team USA Gymnastics doctor Nassar in Charlotte

officers pulled him from the courtroom, he implored them, "What if this happened to you guys?"

The judge then ordered a recess.

The attempted attack underscored the anguish Nassar's abuse has caused his victims' parents, some of whom were present in the doctor's exam room even as Nassar, unbeknownst to them, was molesting their children. Several have spoken in court about the guilt they feel for exposing their children to a sexual predator.

NASA has warned that Earth's North and South magnetic poles are about to flip, causing worldwide blackouts and lethal levels of radiation to sweep over the planet.

Historically, the poles have flipped every 200,000 to 300,000 years. It has been 780,000 years since they last flipped – meaning that a shift is massively overdue. According to scientists at NASA, the planet is showing signs that a shift is imminent.

Yahoo News reports: Our planet's magnetic field protects us from lethal levels of radiation from phenomena like solar rays. The dangerous particles never hit us directly, because upon entering the Earth's atmosphere the magnetic field deflects them and forces them to move around, according to NASA.

So the prospect of that field weakening, which it does when it's getting ready to flip, is worrisome: It would leave us without sufficient protection.

The Earth's North magnetic pole has been wandering at 10-year intervals from 1970 to 2020, as seen in this animation from the National Centers for Environmental Information. NOAA National Centers for Environmental Information.

The Earth's magnetic field extends out from electrical currents created by the metals in its core, generating invisible lines that touch back down at the planet's opposing magnetic poles. Cosmic radiation expert Daniel Baker, director of the Laboratory for Atmospheric and Space Physics at the University of Colorado, Boulder, believes that the next pole reversal could likely render some areas of the planet unlivable, according to Undark.

Earth's North and South magnetic poles have flipped every 200,000 to 300,000 years. It has been 780,000 years since they last flipped meaning that a shift is massively overdue.

That devastation could arrive through multiple avenues. The combination of powerful space particles, like unfiltered solar rays, cosmic rays and ultraviolet B rays (the stuff your sunscreen bottle warns you about), would smash through our battered ozone layer and lead us the way of the dinosaurs.

Our infrastructure wouldn't fare much better. Since satellite grids are linked, once radiation eats through, more will follow, causing a cascading mass blackout, among other disasters, according to Undark.

Because we haven't reached that point yet, scientists are using imagery from satellites to

NASA: Earth's Poles Are About To Flip – Worldwide Blackouts Possible

Compiled And Edited By John T. Robbins, Southern Daily Editor

track the magnetic field's movements. Since 2014, Swarm—a trio of satellites from the European Space Agency—has allowed researchers to study changes building at the Earth's core, where the magnetic field is generated. Their observations reveal that both the molten iron and nickel are draining out of the Earth's core. That kind of restless activity could indicate that the field is preparing to flip, according to Undark. Protective measures could include building more radiation-fortified satellites, plus shoring up ones that are already operational, according to the International Business

INTERNATIONAL BUSINESS TIMES

Times. Not all of the Earth's polarity reversal attempts are successful; the poles last put out a botched effort around 40,000 years ago, according to Futurism. And scientists have yet to establish a cause-and-effect relationship between pole reversals and mass extinctions. But that doesn't mean there isn't one. We might not know when the poles will finally complete their long-overdue switch, but we at least have the advantage of being able to prepare. (Courtesy <http://yournewswire.com>)

Related

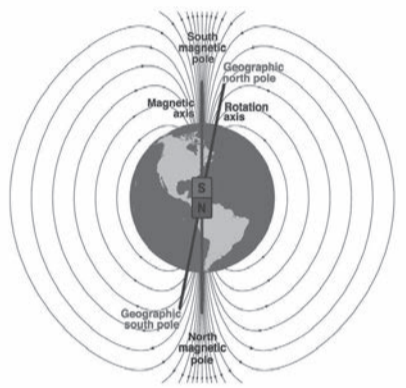

Earth's Magnetic Poles Are Overdue For a Switch And We're Not Prepared

The Magnetic Field Is Already Shifting

Earth's magnetic field is pretty adept at flip-

ping polarity. The poles have swapped, reversing north and south, many times over the planet's history.

Within the last 20 million years, Earth has fallen into the pattern of pole reversal every 200,000 to 300,000 years, and between successful swaps, the poles sometimes even attempt to reverse and then snap back into place. About 40,000 years ago, the poles made one such unsuccessful attempt, and the last full swap was about 780,000 years ago, so we're a bit overdue for a pole reversal based on the established pattern.

The change could cause disastrous repercussions.

The planet's magnetic field is already shifting, which could signify the poles are preparing to flip, and while we can't yet confirm that a reversal is on the near horizon, it is well within the realm of possibility.

While a pole reversal isn't entirely uncommon when you consider Earth's history, this time it could have serious implications for humanity. To try to determine whether or not a flip is im-

minent, scientists have begun using satellite imagery and complex calculations to study the shifting of the magnetic field.

They've found that molten iron and nickel are draining energy from the dipole at the edge of the Earth's core, which is where the planet's magnetic field is generated.

They also found that the north magnetic pole is especially turbulent and unpredictable. If the magnetic blocks become strong enough to sufficiently weaken the dipole, the poles will officially switch.

Again, while it is not a certainty that the switch will happen soon, this activity at the Earth's core suggests that it is possible in the near future. So, how might a pole switch impact our lives?

What would happen if Earth's magnetic field flips?

Mass extinction: Some experts believe changes to the magnetic field would allow dangerous particles to rain down on Earth. They say the magnetic field disappears entirely during a flip, leaving us vulnerable. However, this theory proved controversial and several scientists have said mass extinctions are unlikely to be caused by the flip.

The atmosphere could disappear: Thankfully, this scenario is highly unlikely. However, it is believed that Mars' atmosphere was stripped by the solar wind because it does not have a strong magnetic field.

The economy could collapse: The flip could bring down power grids across the world, potentially crashing stock markets and stopping economies from working properly.

The Earth's magnetic field protects the planet from solar and cosmic rays. When the poles switch, this protective shield could diminish to as little as one-tenth of its typical ability. The switching process could take centuries, and the entire time, radiation would be able to get closer to the planet than usual.

Eventually, this radiation could reach the surface of the Earth, rendering some regions uninhabitable and causing entire species to go extinct.

Before that happened, though, a weakened magnetic field would likely impact orbiting satellites, which have suffered from memory failure and other damage when exposed to such radiation in the past.

Damage to satellites caused by decreased protection from the magnetic field could affect the satellite timing systems that control electric grids.

These grids could fail, leading to worldwide blackouts that experts predict could last for decades.

Without functioning electric grids, we couldn't use cell phones, household appliances, and so much more. The sudden blackouts would have hospitals scrambling for backup power sources, putting countless lives at risk.

GPS technology would also be compromised, affecting everything from military operations to our ability to navigate our cars.

Additionally, we are becoming more reliant on technology by the day, with autonomous vehicles, artificial intelligence (AI), and other innovations all advancing rapidly.

By the time a pole switch did take place, these innovations could be a regular part of our daily lives, furthering the potential for disruption.

It's true that we live in an age where data rules all. From how we communicate to how we get around to how our governments and critical facilities run, it all comes down to how we send and store data, so if the world's satellites are damaged or rendered nonfunctional, life as we know it could forever change.

But this isn't a doomsday prediction. While the poles will inevitably flip again at some point, our ability to recognize this possibility in advance allows us to prepare for it.

For starters, satellite companies can begin to collaborate, sharing ideas with one another on how to equip satellites to deal with a pole reversal.

Government and university researchers can focus their efforts on developing new satellites specifically designed to withstand extreme radiation and space weather.

Governments, businesses, and communities can come together to form action plans.

They can find ways to store energy and ensure the public is educated on the subject of pole reversal, so that when it happens, the situation won't cause widespread panic.

Earth's poles have been switching for millions of years, and they will continue to do so for the foreseeable future. The best thing we can do is prepare now so we're ready the next time it happens. (Courtesy <https://www.sciencealert.com> and published originally published by Futurism)

Harris County Attorney Vince Ryan announced Wednesday his office has filed a lawsuit against 21 drug manufacturers and distributors, four doctors and one pharmacist because of the opioid epidemic. All of them operate in Harris County.

The companies Purdue Pharma L.P., Cephalon Inc. and Janssen Pharmaceuticals Inc. are three of the defendants and they are referred to in the lawsuit as manufacturers, distributors and sellers of opioids in Harris County and the rest of the United States.

Harris County Attorney Vince Ryan announces plans to file lawsuits against pharmaceutical companies and doctors.

The doctors the county is suing are: Gazelle Craig, Arun Shmma, Karin Sharma and Richard Arthur Evans. The lawsuit also lists pharmacist David Devido as one of the defendants. The lawsuit contends the “defendants knew that the use of opioids had the potential to cause addiction and other health maladies” and adds that “driven by profit, defendants engaged in a campaign of lies, half-truths, and deceptions to create a market that encouraged the over-prescribing and long-term use of opioids even though there was no scientific basis to support such use.” (Find the document of the lawsuit at the bottom of the story).

As for the impact the opioid epidemic has in Harris County, the lawsuit indicates that opioid prescribing rates in the county “historically have been above average and as high as 79.4 prescriptions per 100 persons.”

The lawsuit adds that “of the more than 33,000 opioid-related deaths in the United States in 2015, 2,588 were in Texas” and adds that “Harris County bore its share of this burden, with 318 (12.3%) of these deaths occurring in the county.”

“I would never say the pharmaceutical companies dropped the ball,” lawyer Tommy Fibich said. “The

Harris County Attorney Vince Ryan Sues 21 Manufacturers And Distributors, 4 Doctors, And 1 Pharmacist Operating In The Area

Harris County Sues Pharmaceutical Companies, Doctors For ‘Opioid Epidemic’

Compiled And Edited By John T. Robbins, Southern Daily Editor

pharmaceutical companies blew up the ball, and kicked it out to the public, for it to explode.”

During a news conference held in downtown Houston, Ryan blamed pharmaceutical companies for promoting opioids too widely. Being addicted to painkillers, or opioids, is a serious health issue in Houston and nationwide. In October, President Trump even declared the opioid crisis a “national public health emergency, under federal law.” It’s the first presidential administration to do so.

According to the Centers for Disease Control and Prevention, opioid prescribing has fueled the epidemic. It said nearly half of all U.S. opioid overdose deaths involve a prescription. And a recent government report said the US economy lost over 500 billion dollars from opioid abuse, in 2015.

When it comes to the question of who should pay for the losses, Harris County has said that the drug companies should; just like tobacco companies were made to pay for smoking-related health care and prevention.

“It’s exactly pharmaceutical’s tobacco moment,” said lawyer Tommy Fibich. He’s one of the several lawyers representing Harris County against the pharmaceutical companies mentioned in the lawsuit.

“These are the most addictive drugs on our planet. They knew that. They promoted them in a way that caused people to be addicted to them,” said Fibich. “The problem is the companies that manufactured opioids went against every statute in law designed to protect the consumer.”

Fibich said the regulations in place should have worked, but they weren’t enforced.

“The manufacturers and distributors, primarily, managed to disregard them. They did it with impunity. And everybody was making so much money that they were willing to do it and take the risk,” said Fibich.

The Harris County’s lawsuit is not the first of its kind. Lawsuits of this nature have been popping up across the country. Upshur County, in East

Texas, filed a similar lawsuit in September. Healthcare Distribution Alliance (HDA) is a national trade association that represents wholesale distributors, some of whom are involved in the lawsuit.

In a statement, HDA spokesman John Parker said:

“As distributors, we understand the tragic impact the opioid epidemic has on communities across the country. We are deeply engaged in the issue and are taking our own steps to be part of the solution – but we aren’t willing to be scapegoats.

Distributors are logistics companies that arrange for the safe and secure storage, transport, and delivery of medicines from manufacturers to pharmacies, hospitals, long-term care facilities, and others based on prescriptions from licensed physicians. We don’t make medicines, market medicines, prescribe medicines, or dispense them to consumers.

Given our role, the idea that distributors are solely responsible for the number of opioid prescriptions written defies common sense and lacks understanding of how the pharmaceutical supply chain actually works and how it is regulated.

We are ready to have a serious conversation about solving a complex problem and are eager to work with political leaders and all stakeholders in finding forward-looking solutions.”

AmerisourceBergen, Janssen Pharmaceuticals, and Teva Pharmaceutical Industries Ltd., also involved in the suit, provided Houston Public Media with statements:

Janssen Pharmaceuticals: Responsibly used opioid-based pain medicines give doctors and patients important choices to help manage the debilitating effects of chronic pain. At the same time, we recognize opioid abuse and addiction is a serious public health issue that must be addressed. We believe the allegations in lawsuits against our company are both legally and factually unfounded. Janssen has acted in the best interests of patients and physicians with regard to its opioid pain medicines, which

are FDA-approved and carry FDA-mandated warnings about possible risks on every product label. According to independent surveillance data, Janssen opioid pain medicines consistently have some of the lowest rates of abuse among these medications, and since 2008 the volume of Janssen opioid products always has amounted to less than one percent of the total prescriptions written per year for opioid medications, including generics. Addressing opioid abuse will require collaboration among many stakeholders and we will continue to work with federal, state and local officials to support solutions.

- William Foster, spokesperson, Janssen Pharmaceuticals, Inc.

AmerisourceBergen: AmerisourceBergen and other wholesale drug distributors are responsible for getting FDA-approved drugs from pharmaceutical manufacturers to DEA-registered pharmacies, based on prescriptions written by licensed doctors and health care providers. Our role in doing so is quite widespread across different therapies, with the distribution of opioid-based products constituting less than two percent of our sales. We are dedicated to doing everything within our power as a distributor to mitigate the diversion of these drugs without interfering with clinical decisions made by doctors, who interact directly with patients and decide what treatments are most appropriate for their care. Beyond our reporting and immediate halting of tens of thousands of potentially suspicious orders, we refuse service to customers we deem as a diversion risk and provide daily reports to the DEA that detail the quantity, type, and the receiving pharmacy of every single order of these products that we distribute. We are committed to collaborating with all stakeholders, including in Texas, on ways to combat opioid abuse

Teva Pharmaceutical Industries Ltd.: Teva is committed to the appropriate use of opioid medicines, and we recognize the critical public health issues impacting communities across the U.S. as a result of illegal drug use as well as the misuse and abuse of opioids that are available legally by prescription. To that end, we take a multi-faceted approach to this complex issue; we work to educate communities and healthcare providers on appropriate medicine

use and prescribing, we comply closely with all relevant federal and state regulations regarding these medicines, and, through our R&D pipeline, we are developing non-opioid treatments that have the potential to bring relief to patients in chronic pain. Teva offers extensive resources for prescribers, patients and pharmacists regarding the responsible pain management and prevention of prescription drug abuse. Teva also collaborates closely with other stakeholders, including providers and prescribers, regulators, public health officials and patient advocates, to understand how to prevent prescription drug abuse without sacrificing patients’ needed access to pain medicine.

Marc Fleming, Assistant Professor of Pharmaceutical Health Outcomes and Policy at the University of Houston College of Pharmacy, said while there is an issue in Harris County, there’s responsibility and blame all around.

“From a societal stand point, to the individual patients, to unscrupulous doctors that enable these patients with unethical prescribing of these medications,” said Fleming.

Marc Fleming, Assistant Professor of Pharmaceutical Health Outcomes and Policy at the University of Houston College of Pharmacy, said responsibility and blame reaches further than only the pharmaceutical companies.

Fleming also said there are many factors contributing to opioid abuse; one being lyrics to popular songs referencing prescription medication abuse.

“These medications are commonly talked about in some of these lyrics, and so forth,” said Fleming. “One of my concerns is that we have a generation of kids that has grown up very accustomed to taking medications. So there’s nothing taboo, for this generation, about taking a medication.”

Fleming said if damages are awarded to Harris County, it would be best spent in rehabilitation, and other alternatives to help pain management; like yoga and physical therapy.

“Does your insurance cover that? Typically not,” said Fleming. “How are you going to pay for that? These are things that are not being addressed.”

Lawyers say a trial date could come in the next year. (Courtesy www.houstonpublicmedia.org/articles/news)

How each Super Bowl starter was ranked as a high school recruit

By Matt Young

Good news for those high school football players who aren't ranked as highly as they think they should be: That also was the case for most of the players starting in Sunday's Super Bowl.

The Patriots have just five starters who were ranked as a four-star or five-star recruit when they were coming out of high school. However, one of those top recruits is defensive tackle Mal-

com Brown, who was ranked as the ninth-best recruit in the nation when he was at Brenham High School.

On the flip side, the Patriots have guys like starting linebacker Elandon Roberts, who wasn't even rated at all - he was given no stars by 247Sports.com - when he signed with the University of Houston out of Port Arthur Me-

morial. The Eagles have many more players who were big-time recruits - five players who were given five stars by 247Sports and ranked in the top 30 nationally of their recruiting class.

PATRIOTS OFFENSE
Wide receiver: Chris Hogan
Franklin Lakes, New Jersey
Unranked - Monmouth

Central Texas fire captain accused of inappropriately touching juvenile firefighter

Jay R. Jordan

A central Texas fire captain is behind bars, accused of inappropriately touching a juvenile firefighting recruit. Daniel Dilworth, 22, was also a school bus driver and substitute teacher at Burnet Consolidated Independent School District at the time of his arrest, according to KXAN-TV in Austin. Dilworth heads the Hoover Valley Volunteer Fire Department, a position prosecutors claimed he abused while

he and the young male junior firefighter were together.

The abuse happened during summer 2017, according to police. The teenager told his father about the incidents on Jan. 29, detailing how Dilworth allegedly touched him while the two were on one of the department's fire trucks.

Burnet Consolidated Independent School District said Dilworth's alleged actions were isolated to his firefight-

ing duties, although he has since been fired from the district, according to the TV station.

"There is no reason to believe this incident is related in any way to his employment with Burnet CISD," Superintendent Keith McBurnett said.

Dilworth was arrested Thursday on a felony attempted indecency with a child charge. He is being held in the Burnet County Jail on a

Hoover Valley Volunteer Fire Department Captain Daniel Dilworth, 22, was arrested Thursday after being accused of inappropriately touching a juvenile firefighter in 2017.

育才學校

暑假是學生增強數學能力，提高數學成績的最好時機，所以正確選擇一所好的學校，才能學到更多的知識，新學年才能取得好成績。

育才學校教師“陣容超強”：數學張老師是HISD從中國招聘的，直接來休士頓教高中數學的高級教師，這在中、美兩國的高中領域，都是絕無僅有的。張老師能夠在很短的時間內，提高學生的數學成績，增強數學能力，這在2010-2015年的暑假已經得到了驗證。英語教師是美國現任初中、高中英語教師（有證）
