White House proposes 6-trln-USD budget for FY 2022

WASHINGTON, May 28 (Xinhua) -- The White House on Friday unveiled a 6-trillion-U.S.-dollar budget proposal for the 2022 fiscal year, drawing backlash from Republican lawmakers and budget watchers.

The proposal, which included President Joe Biden's plan to increase investment in infrastructure, education, health care and beyond, would push federal spending to the highest sustained levels in decades.

The budget calls for total spending to run above 6 trillion dollars throughout the next decade, and rise to 8.2 trillion dollars by fiscal year 2031. Deficits, meanwhile, would stay above 1.3 trillion dollars in the next 10 years.

Senate Minority Leader Mitch McConnell lashed out at the plan, arguing, "Americans are already hurting from far-left economics that ignore reality."

"So far the Biden Administration has recommended we spend 7 trillion additional dollars this year," the Republican leader said on Twitter. "That would be more than we spent during World War II."

"Democrats need to get their runaway spending

A citizen receives a dose of the COVID-19 vaccine developed by Chinese pharmaceutical company Sinovac in Bangkok, Thailand, May 12, 2021. (Xinhua/Rachen Sageamsak)

We know from history that these kinds of investments raise both the floor and the ceiling of the economy for everybody," the U.S. president said Thursday in a speech in Ohio.

The foundation noted that the administration proposes increasing revenues to cover the cost of their longer-term initiatives; "however, those costs would not be fully offset during the traditional 10-year window, rather over a 15-year period."

"In addition, the underlying structural imbalance between revenues and spending that existed before the pandemic budget would remain, leaving an unsustainable fiscal outlook," it added

habits under control," McConnell said.

Biden, however, argued that the American Rescue Plan, the 1.9-trillion-dollar COVID-19 relief package approved in March, is just a "first step," noting that more investments are needed to set America on a sustainable path to a faster, more inclusive economic growth.

"Now is the time to build the foundation that we've laid -- to make bold investments in our families, in our communities, in our nation.

Peter G. Peterson Foundation, a nonpartisan fiscal watchdog group, said in a statement that the president's budget for fiscal year 2022 calls for a "large increase" in non-defense discretionary spending next year as well as "substantial spending" for infrastructure and social programs over the upcoming decade.

U.S. to sanction Belarus over flight diversion incident

WASHINGTON, May 29 (Xinhua) -- The United States will introduce a series of sanction measures against Belarus over the Ryanair flight diversion incident, the White House said Friday.

"On June 3, 2021, the United States will re-impose full blocking sanctions against nine Belarusian state-owned enterprises previously granted relief under a series of General Licenses by the Treasury Department," White House Press Secretary Jen Psaki said in a statement.

The United States is developing a list of targeted sanctions against key members of the Belarusian government. The Treasury Department will develop a new executive order giving President Joe Biden greater authority to impose sanctions against Belarus, said the statement.

The United States will also suspend its discretionary application of the 2019 U.S.-Belarus Air Services Agreement, it added.

The Irish airline Ryanair said that the flight FR4978 from Athens to Vilnius was directed to an airport in Minsk on Sunday as crew on the plane had been alerted to a possible security threat by Belarusian authorities, but nothing untoward was found.

The Biden administration earlier this week condemned the incident "in the strongest possible terms," calling it a "direct affront to international norms."

On Friday, when discussing the aftermath of the Ryanair incident with Russian President Vladimir Putin, Belarusian President Alexander Lukashenko said, "there has been an attempt to stir up the situation."

their government to invite all of us to visit Guinea in the near future.

As Honorary Consul for Guinea in Houston, our goal is to establish a solid bridge between Houston and Guinea and to bring more investors and people to Africa.

At today's forum we listened to many businessmen and scholars who expressed their opinions and their willingness to help this western African country.

We are so glad many of our friends got together at the International Trade Center to join Ambassador Yansane to talk about investing in Guinea.

Today we discussed many topics including education, telecommunication, agriculture, tourism, healthcare, infrastructure and media.

In my welcome speech I warmly welcomed all of those who could come to ITC the reunion after the pandemic.

The Ambassador gave us a very detailed introduction about this West African country. He is representing

A Pictorial Essay

A Brief History Of Vaccine Delivery Through The Years

In January 1929, Dr. L.E. Bensem of Los Angeles used his vacation to mush to native villages in Alaska. At the close of a particularly hard day on the trail, he found himself with 70 patients on his hands, all suffering from smallpox. There were 100 people in the village with no medical facilities. Bettmann/Getty Images

Compiled And Edited By John T. Robbins, Southern Daily Editor

Vaccines delivered by drones and by burros. People who shout about the danger of vaccines and refuse to get a jab. Public health campaigns to convince the vaccine hesitant. Public criticism of a failure to provide vaccines for lower-income countries and marginalized populations. These are all part of the unprecedented world vaccination campaign now going on. They're also the hot-button topics that go back to the very first vaccine — for smallpox in 1796.

Dr. Sergen Saracoglu (left) and nurse Yildiz Ayten (center) arrive at the village of Guncyyamac in Turkey on Feb. 15 as part of an expedition to vaccinate residents 65 years and over with Sinovac's CoronaVac COVID-19 vaccine. (Photo/Bulent

Kilic/AFP via Getty Images) In photographs and illustrations from past and present vaccine campaigns, you can see both the similarities and the striking contrasts. James Colgrove, a professor of sociomedical sciences at Columbia University, and Sanjoy Bhattacharya, a professor of history at the University of York and director of the WHO Collaborating Centre for Global Health Histories, helped us out with historical context to go along with the images.

The vaccine has been created. Now how to get it where it needs to go? Getting a vaccine from point A to point B has been a logistical problem since the very start with the smallpox vaccines, Bhattacharya says. Back then, it was a painstaking process. Liquid was usually taken from an open smallpox sore, dried and mixed with water when ready to vaccinate. But transportation delays would sometimes render the

vaccine ineffective. (The method had a shelf life of weeks to months — not a long time considering the transport options at the time.)

In 1900, a young cow is tied onto a table waiting for the extraction of pox sore to be used for vaccines for smallpox. (Photo/Berliner Illustrations Gesellschaft/ullstein bild via Getty Images)

The solution? Medical teams would take children (in one case, orphans were used to transport the virus from Spain to its colonies) and animals (such as cows and horses) from village to village or from country to country, harvesting liquid from smallpox or cowpox sores and getting it under the skin of an unvaccinated person. But that was clearly not a sustainable practice, Bhattacharya says, for ethical and scientific reasons. Many years of innovation followed, including the development of freeze-dried vaccines. The COVID-19 vaccine world is dependent on cold chain technology that uses super freezers to keep vaccines at temperatures as low as minus 13 degrees Fahrenheit while they make their way on planes, trains and automobiles.

Ousseynou Badiane, the head of Senegal's vaccination program, stands in front of newly built cold rooms at Fann Hospital in Dakar, Senegal, in January. These cold rooms may be used to help store the country's stock of COVID-19 vaccines. (John Wessels/AFP via Getty Images)

Relying on cold storage technology is still not a perfect system. The challenge has always been the greatest in poor and rural areas. "You have to make sure you have generators to main-

tain refrigerators," Colgrove says. It is the same problem countries are having with the COVID-19 vaccine today.

The ship was anchored off Bremerhaven, West Germany, after a flu outbreak. Right: Health workers use a speedboat to make their way to vaccinate Quilombo communities against COVID-19 in Oriximiná, Brazil, in February. (Photo/Henry Brueggemann/AP; Tarso Sarraf/AFP via Getty Images)

Vaccine inequity is "just one part of a larger picture of inequity," Colgrove says. "People have been unvaccinated for the same set of reasons that they have always been deprived of other material goods."

For every vaccine, there's been a campaign against it

"Anti-vaccination movements are as old as vaccines themselves," Bhattacharya says. What drives people to oppose a vaccine? You have to look at what is happening in a country or community culturally and politically and that is where you'll find your answers. It is usually a combination of factors that create doubts about how safe and effective a vaccine is, Bhattacharya says.

Left: A drawing of a human with a cow head holding a needle menacingly toward a child as he administers a tainted smallpox vaccination was meant to sow distrust of smallpox vaccines. Right: Protesters against COVID-19 vaccinations hold a rally in Sydney in February. (Photo/Bettmann/Getty Images; Brook Mitchell/Getty Images)

But what really gets people riled up, Colgrove says, is when governments mandate vaccinations. "What gets people marching in the stress, forming orgs, creating pamphlets is when governments start to require it. If you don't want the vaccine, but you don't feel like anyone is forcing you to get it, then you just don't get it. Anti-vaccination movements really arose in the mid-19th century when governments started to require it."

There have always been trust issues

A vaccine campaign must address the issues of trust between those giving the vaccines and those receiving it, Bhattacharya says. You can't run it just with logistics. The vaccine campaigns that don't take trust into account end up struggling while the process drags on to get a disease under control.

In the case of polio, Bhattacharya says, it was difficult to convince communities to get the vaccine in places where governments hadn't acted in the communities' interest on other issues.

Boys stand in line to be vaccinated through the smallpox eradication and measles control program in West Africa in 1968. While smallpox has been eradicated, measles remains a leading cause of death among young children, even though a safe and cost-effective vaccine is available, the World Health Organization says. (Smith Collection/Gado/Getty Images)

"It was about [the government] convincing people that the polio vaccination was about their best interests in a context where governments had done little for their general welfare. This was the context in which polio vaccination drives were resisted in northern India, for example," Bhattacharya says. People have said it was superstition about the vaccine that prevented Indians from getting the vaccine, but it was actually about "a fundamental lack of trust."

A Brief History Of Vaccine Delivery Through The Years

It's all about the advertising To get the word out and make a convincing argument about the vaccine, it's all about marketing and messaging. Advertising techniques were first used in the 1920s for diphtheria immunizations, Colgrove says. (Think images of smiling babies with warnings in red ink that diphtheria kills.)

A 1963 poster featuring the CDC's national symbol of public health, "Well-bee," encourages the public to take an oral polio vaccine. (Photo/CDC/PHIL/Corbis via Getty Images)

The way a vaccine is given is also critical. The first oral vaccine in the 1960s for polio replaced the hypodermic needle. It certainly made it much easier to sell to those who might be hesitant or fearful of needles, Colgrove says.

"Needle phobia is a big deal, and orally administered vaccines are more acceptable to many people. Also you don't have to worry about the injection equipment [which was helpful for mass vaccinations]," Colgrove

says. "In fact one of the reasons the global polio eradication ended up being so successful was they used the oral vaccine as opposed to the injected vaccine." The oral vaccine also did a better job of protecting against the virus.

The West makes the vaccines and the rules. That's actually kind of new

The West wasn't always the main player in vaccine production — although it was always on the path to be. Following World War II, several newly independent (decolonized) countries were keen to develop their own vaccine production capabilities. Two examples are India and Pakistan, Bhattacharya says. "Countries like India and Pakistan were able to play Cold War foes [the U.S. and Soviet Union] against each other to get access to new vaccine production technologies, assistance in setting up new vaccine production units," he adds. So how did the West ultimately get control? In that post-World War II era in the West, people started to realize there was money to be made in all pharmaceuticals (not just vaccines), and "the business landscape changed," Colgrove says.

What had been a cottage industry of small pharmaceutical companies, individual investigators and physician scientists started producing more products along with vaccines, Colgrove says. They evolved into the mega companies that exist today.

That said, other countries are still in the vaccination business — albeit with mixed results — including Russia's Sputnik V, China's Sinovac and outlier Cuba.

Workers wait to open a secure door in the packaging area of Sinopharm's COVID-19 vaccine during a media tour organized by the State Council Information Office in February in Beijing. Sinopharm is one of China's largest state-owned biotech companies. Kevin Frayer/Getty Images

The power and politics behind vaccines

Politicians love their mottos and the vaccination effort is no different. In the U.S., government officials called it Operation Warp Speed and now the "We Can Do This" campaign. In Germany, it's "Vaccinate, Vaccinate, Vaccinate." In Israel, it's "Getting Back to Life." So, how much of vaccine production and distribution is about political power and money?

Bhattacharya says pretty much all of it. "Pandemic responses, including the vaccination programs that underpin them, are always political," he says. "Those who claim that they know the means of accentuating 'global solidarity' are no less political; they just have different political goals."

Left: Thousands of New Yorkers, on an appeal by government officials, came to city hospitals and health stations to get vaccinated against smallpox. Here a crowd lines up outside a Bronx hospital in April 1947. Right: In an aerial view from a drone, cars line up for a mass COVID-19 vaccination event in January in Denver. (Photo/Bettmann/Getty Images; Michael Ciaglo/Getty Image)

And the money? Most vaccines wouldn't exist if Big Pharma didn't make a profit off them, Colgrove says.

One of the criticisms is that we have vaccines for diseases that burden rich countries but not for those that plague poor countries — such as malaria and dengue fever. "If those diseases were a problem in Europe and the U.S., we would probably have vaccines for them now."

That's the contradiction of the pharma industry, Colgrove says. "On the one hand they produce these drugs for the benefit of everyone, but their mission is to make profits for their shareholders."

What will the world say about the COVID-19 vaccination effort in 100 years?

People will not remember the details, Colgrove says. Take, for example, the polio vaccine rollout, he says. If you ask people today, they would say it was a huge success, but they forget it was total chaos for a while. "There were a lot of problems with the initial distribution during the period when the demand exceeded the supply. The polio vaccine was developed by a nonprofit foundation. The U.S. government had very little involvement because the Eisenhower administration saw involvement as the opening for socialized medicine.

"There was also lots of confusion and uncertainty about who should get the vaccine first and supplies were limited. There were stories of rich people pulling strings to get their kids vaccinated first."

Sanitation worker Ramesh Solanki cleans the streets outside India's Palghar railway station. "I get up every morning at 5:30, and I see news about the vaccines on TV," he says. "I don't know about any controversies. I just know I'm proud to be part of this." As a sanitation worker, he was among the first Indians eligible to get the coronavirus vaccine. (Photo/Viraj Nayar for NPR)

When it came to the COVID-19 vaccine, the Centers for Disease Control and Prevention knew there were limited supplies so it was able to prioritize certain populations such as health care workers and older people, Colgrove says. "But I think the way people will remember the COVID rollout will depend on what happens in the coming months and years."

No one can deny the incredible feat of making vaccines in a year. But Bhattacharya points to another legacy. Bhattacharya says it's unfortunate, but this vaccination effort will be all about profits, not humanity — the world was let down when it comes to equity and access to the vaccine.

Two men, wearing personal protective equipment, visit the grave of a relative in a public cemetery, reserved for suspected COVID-19 victims, in December in Jakarta, Indonesia. Ulet Ifansasti/Getty Images

"I think our descendants will look back with some shame at the efforts of so many private vaccine producers to make immense profit from human misery and anxiety." (Courtesy npr.org) NPR Writers include: Michele Abercrombie, Xueying Chang, Ben De La Cruz and Suzette Lohmeyer.
